

Chapter 4 – Scrum Framework

Learning Objectives

Understand the Scrum framework, roles, events, artifacts, commitments, workflow, estimation techniques, metrics, and best practices.

What is Scrum?

Scrum is a lightweight Agile framework that helps teams deliver valuable software in short, time-boxed iterations called Sprints. It emphasizes transparency, inspection, and adaptation.

Scrum Framework Overview

Scrum Values

Value	Meaning
Commitment	Focus on agreed Sprint Goal
Focus	Work on highest priority items
Openness	Share progress and issues
Respect	Value every team member
Courage	Address challenges and improve continuously

Scrum Accountabilities

Product Owner: Owns Product Backlog and maximizes value.

Scrum Master: Coaches Scrum, removes impediments, facilitates events.

Developers: Design, build, test, document, and deliver the Increment.

Scrum Events

Sprint: Fixed time-box (1–4 weeks).

Sprint Planning: Select Product Backlog Items and define Sprint Goal.

Daily Scrum: 15-minute inspection and planning meeting.

Sprint Review: Demonstrate Increment and collect stakeholder feedback.

Sprint Retrospective: Identify improvements for the next Sprint.

Scrum Artifacts & Commitments

Product Backlog → **Product Goal**

Sprint Backlog → **Sprint Goal**

Increment → **Definition of Done (DoD)**

Scrum Workflow

Estimation & Metrics

Story Points, Planning Poker, Velocity, Burndown Chart, Burnup Chart, Lead Time, Cycle Time.

Definition of Ready vs Definition of Done

Definition of Ready (DoR): Criteria before work starts (clear, estimated, testable).

Definition of Done (DoD): Criteria before work is complete (coded, reviewed, tested, documented, deployable).

Benefits

• Faster feedback • Higher quality • Better transparency • Predictable delivery • Continuous improvement

Challenges

• Changing priorities • Stakeholder availability • Cross-functional skill gaps • Estimation inaccuracies

Real-world Banking Example

A digital banking team plans a two-week Sprint to implement beneficiary management. The Product Owner prioritizes stories, Developers build and test features, the Sprint Review demonstrates working functionality, and the Retrospective identifies process improvements.

Interview Questions

1. Scrum vs Agile.
2. Explain Scrum accountabilities.
3. What is the Sprint Goal?
4. Product Backlog vs Sprint Backlog.
5. What happens during Sprint Review and Retrospective?
6. Explain Definition of Done.
